

GEO Analysis Report

Generative Engine Optimization Audit for **SILKinCOM**

Website	https://silkincom.vercel.app/
Analysis Date	May 19, 2026
GEO Score	62/100 — Moderate

Moderate

Executive Summary

Re-audit of the Next.js SILKInCOM site after the i18n and SEO work. The GEO Score rose from 57 (Poor) to 62 (Fair). Content is now translated and indexable across seven languages, URLs carry locale prefixes, the sitemap ships hreflang alternates, and schema is solid and fully server-rendered. AI citability and content quality both improved. Two critical code regressions hold the score back: the canonical tag is correct only in Italian — on EN/ES/FR/DE/PT/NL it points to the Italian URL, telling Google the six translated languages are duplicates, which negates the multilingual migration. Off-site brand authority also remains near zero: no Wikipedia, Wikidata, Reddit, LinkedIn or press presence, and the brand name collides with several Como silk competitors.

GEO Score Breakdown

Component	Score	Weight	Weighted
AI Citability & Visibility	78/100	25%	19.5
Brand Authority Signals	15/100	20%	3.0
Content Quality & E-E-A-T	64/100	20%	12.8
Technical Foundations	78/100	15%	11.7
Structured Data	84/100	10%	8.4
Platform Optimization	61/100	10%	6.1
OVERALL	62/100	100%	62

AI Platform Readiness

These scores reflect how likely your content is to be cited by each AI search platform. A score below 50 indicates significant barriers to citation on that platform.

AI Platform	Score	Status
Google AI Overviews	66/100	Moderate
ChatGPT	67/100	Moderate
Perplexity	46/100	Below Average
Gemini	60/100	Moderate
Bing Copilot	52/100	Below Average

AI Crawler Access Status

Blocking AI crawlers prevents AI platforms from citing your content. The table below shows which AI crawlers can currently access your site.

Crawler	Platform	Status	Recommendation
GPTBot	ChatGPT	Allowed	Keep allowed
ChatGPT-User	ChatGPT	Allowed	Keep allowed
ClaudeBot	Claude	Allowed	Keep allowed
PerplexityBot	Perplexity	Allowed	Keep allowed
Google-Extended	Gemini	Allowed	Keep allowed
CCBot	Common Crawl	Allowed	Keep allowed
Bingbot	Bing Copilot	Allowed	Add Bing Webmaster verification + IndexNow

Key Findings

[CRITICAL] Canonical wrong on 6 of 7 locales

Every non-Italian page (/en/*, /es/*, /fr/*, /de/*, /pt/*, /nl/*) emits a canonical pointing to the Italian URL instead of itself. The canonical in generateMetadata is a relative path without the locale prefix. Google treats the six translated languages as duplicates of Italian and will deindex them — negating the multilingual migration. Fix: build a per-locale canonical including the locale prefix.

[CRITICAL] Schema @id host mismatch + placeholder LocalBusiness

Organization/WebSite @id use host silkincom.com while the live site and all other refs use silkincom.vercel.app — inconsistent entity URI. /contatti emits a second conflicting LocalBusiness node with a placeholder address and a fake phone number +39 031 0000000. Unify @id hosts and remove the placeholder node.

[HIGH] No hreflang link tags in page head

Hreflang alternates exist only in sitemap.xml and the HTTP Link header, not in the rendered . Several AI crawlers and preview generators parse only the head. Emit hreflang via metadata.alternates.languages.

[HIGH] og:locale always it_IT, OG tags global

EN/FR pages serve og:locale it_IT and the homepage's Italian og:title/description/url. Social and AI previews get the wrong language and page. Generate Open Graph metadata per page and per locale.

[HIGH] Brand non-existent off-site (authority 15/100)

Zero presence on Wikipedia, Wikidata, Reddit, LinkedIn, Trustpilot or press. The name collides with competitors (INCOMO, Silk of Como, SILKSILKY, Creasilk) so AI engines cite the competitors. Structural ceiling on real AI visibility.

[HIGH] Founder invisible, no author bylines

Founder Marco Dibenedetto appears only in llms.txt, never in visible HTML. /la-nostra-storia is ~280 words (thin content). All 4 blog posts are attributed to the Organization, with no named human author — the strongest unused E-E-A-T lever.

[HIGH] No ItemList/CollectionPage schema on collections

The 10 /collezioni/* pages emit only Organization and WebSite schema. Products are not enumerated for AI. Add CollectionPage + ItemList schema.

[MEDIUM] Title double brand suffix

Product titles render as 'Bellagio — Cashmere | SILKinCOM | SILKinCOM' — the %s | SILKinCOM template applied to a title that already ends in the brand. Remove the suffix from the page title.

[MEDIUM] Bellagio price/dimensions inconsistent

Homepage shows EUR 120 / 180x45 cm; the product page shows EUR 180 / 180x70 cm. Conflicting facts reduce AI trust. One canonical fact per product.

[MEDIUM] No Bing verification or IndexNow

No msvalidate.01 tag and no IndexNow key file — Bing Copilot indexing is not accelerated.

[LOW] **Article author is Organization, speakable missing**

Blog Article schema uses author Organization instead of Person; stray U+FEFF characters in one post; no speakable specification on Article/FAQ.

Prioritized Action Plan

Quick Wins (This Week)

High impact, low effort — can be implemented immediately.

1. Fix per-locale canonical — include the locale prefix in every generateMetadata canonical, unblocking indexing of 6 languages
2. Emit hreflang alternate link tags in the head via metadata.alternates.languages, plus x-default
3. Set og:locale per locale and generate Open Graph title/description/url per page
4. Remove the duplicated '| SILKinCOM' suffix from page titles
5. Unify schema @id to silkincom.vercel.app and remove the placeholder LocalBusiness node
6. Create a Wikidata entry for SILKinCOM (founder, VAT, Cermenate/Como)

Medium-Term Improvements (This Month)

Significant impact, moderate effort — requires content or technical changes.

1. Add CollectionPage/ItemList schema to all 10 collection pages
2. Switch blog Article author to Person (Marco Dibenedetto); strip U+FEFF characters
3. Reconcile Bellagio price and dimensions across homepage and product page
4. Add a visible founder section to /la-nostra-storia (~600-800 words) with Person schema
5. Add named author bylines and 2-4 external citations to each blog post
6. Add Bing Webmaster verification and an IndexNow key file
7. Replace the decorative homepage H1 with a semantic H1 and question-based H2s

Strategic Initiatives (This Quarter)

Long-term competitive advantage — requires ongoing investment.

1. Build off-site brand authority: Google Business Profile, LinkedIn company page, Trustpilot
2. Earn 3-5 third-party mentions (Como artisan directories, Italian fashion press) to disambiguate from competitors
3. Resolve the canonical domain question — migrate from the vercel.app preview domain to silkincom.com
4. Enable ISR/CDN caching on catalog pages to improve TTFB and Core Web Vitals
5. Add llms-full.txt and speakable schema for deeper AI-assistant readability

Appendix: Methodology

This GEO audit was conducted on 2026-05-19 analyzing <https://silkincom.vercel.app/>. The analysis evaluated the website across six dimensions: AI Citability & Visibility (25%), Brand Authority Signals (20%), Content Quality & E-E-A-T (20%), Technical Foundations (15%), Structured Data (10%), and Platform Optimization (10%).

Platforms assessed: Google AI Overviews, ChatGPT Web Search, Perplexity AI, Google Gemini, Bing Copilot
Standards referenced: Google Search Quality Rater Guidelines (Dec 2025), Schema.org specification, Core Web Vitals (2026 thresholds), llms.txt emerging standard, RSL 1.0 licensing framework

Glossary

Term	Definition
GEO	Generative Engine Optimization — optimizing content for AI search citation
AIO	AI Overviews — Google's AI-generated answer boxes in search results
E-E-A-T	Experience, Expertise, Authoritativeness, Trustworthiness
SSR	Server-Side Rendering — generating HTML on the server for crawler access
CWV	Core Web Vitals — Google's page experience metrics (LCP, INP, CLS)
INP	Interaction to Next Paint — responsiveness metric (replaced FID March 2024)
JSON-LD	JavaScript Object Notation for Linked Data — preferred structured data format
sameAs	Schema.org property linking an entity to its profiles on other platforms
llms.txt	Proposed standard file for guiding AI systems about site content
IndexNow	Protocol for instantly notifying search engines of content changes

This report was generated by the GEO-SEO Claude Code Analysis Tool. Scores and recommendations are based on automated analysis and industry benchmarks. Results should be validated with platform-specific testing.
